Loops in JavaScript: for, while, and do-while

1. for Loop

```
for (let i = 1; i <= 5; i++) {
    console.log(i);
}
/* Output:
1
2
3
4
5
*/</pre>
```

2. while Loop

```
let i = 1;
while (i <= 5) {
    console.log(i);
    i++;
}
/* Output:
1
2
3
4
5
*/</pre>
```

3. do-while Loop

```
let i = 1;
do {
    console.log(i);
    i++;
} while (i <= 5);
/* Output:
1
2
3
4
5
*/</pre>
```

Loop control (break, continue).

Komanda break e nderprene perseritjen(loop-in) totalisht, shembulli:

```
let numbers = [10, 20, 30, 40, 50];

for (let num of numbers) {
    console.log(num);
    if (num === 30) {
        console.log("Number found! Stopping the loop.");
        break; // Stops the loop at 30
    }
}
console.log("Loop exited.");
```

Komanden continue e perdorim kur kemi nevoje ti shamngemi nje selektimi te caktuar ne loop, shembulli me poshtem per shmangjen e numrave tek ne Loop:

```
for (let i = 1; i <= 5; i++) {
    if (i % 2 !== 0) {
        continue; // Skip odd numbers
    }
    console.log(i); // Prints only even numbers
}</pre>
```

Shembulli dhe detyra:

```
for (let i = 1; i <= 10; i++) {
    if (i === 5) {
        console.log("Skipping 5...");
        continue; // Skips 5
    }
    if (i === 8) {
        console.log("Stopping at 8.");
        break; // Stops the loop at 8
    }
    console.log(i);
}</pre>
```

Ne console ose te Inspect element do te na shfaqet rezultati:

```
1
2
3
4
Skipping 5...
6
7
Stopping at 8.
```
